

RJ-CW 12/25

Features

- Single or two-stage options
- Up to 9 containers per cycle
- 360° rotating spray nozzles
- Efficient and safe for operators

The RJ-CW 12/25 is a two-stage machine consisting of a chemical wash followed by a fresh water rinse. This machine is made up of two main sections, a wash chamber to hold up to 12 25L containers and, located underneath, a 125L sump that houses the wash liquor.

Once the operator has loaded the machine, the doors are closed, and the safety interlocks are engaged. The decontamination process begins with a wash cycle in which caustic or detergent is used in combination of the physical action of the spray heads removes contamination from the surface of the drum. To ensure that this is completely clean a rinse cycle immediately follows flushing any residues from the surface of the container.

With 30 years' experience in chemical degreasing we understand the difficulties present across the industry and the variety of contaminants that may be present at varying levels. That's why the RJ-CW 12/25 has full control of cycle times and temperature in the PLC to allow you to adapt your cleaning procedure when needed.

RJ-CW 12/25 - Container Washer

This powerful container washer can wash up 576 pails in a shift and as such is suitable for all but the largest reconditioning companies. Each of the 12 containers in the wash chamber has a rotating nozzle that can easily be placed inside closed topped containers. With 360° rotation on every nozzle covers the inside of the container ensuring an even cleaning quality throughout.

Downtime on any machine can create significant problems within any operation. With that in mind clean-out doors are provided to allow for easy removal of any solid contamination that may accumulate in the sump. This coupled with its robust stainless steel construction, low water detection and filtration makes the RJ-CW 12/25 a machine that can be relied upon in the most demanding industrial applications.

Throughput	2104mm
Height	2104mm
Width	1598mm
Length	1490mm
Tank Capacity	125L
Filtration	>10 micron
