

RJ-CW 9/25

Features

- Single or two-stage options
- Up to 9 containers per cycle
- 360° rotating spray nozzles
- Efficient and safe for operators

The RJ-CW 9/25 washes up to nine 25L containers in a single cycle and can be manufactured as a single or two-stage machine. This container washer consists of two sections, a wash chamber and an integrated sump.

In the two-stage design the machine utilises a chemical wash stage to remove heavy contamination through both chemical action and the physical impingement caused by the spray heads. This is then followed by a freshwater rinse to remove any remaining residues.

As the operator loads the machine each container is placed over its dedicated spray head to ensure all interior surfaces are covered, achieving an even cleaning quality throughout. Once the machine is loaded, the door is closed, and the safety interlocks are engaged. The machine is then automatically taken through a pre-programmed cycle and once complete the steam and vapours are expelled through the exhaust, assisting in the products air drying.

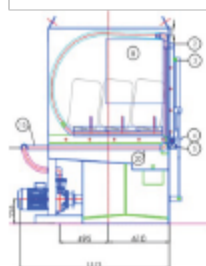

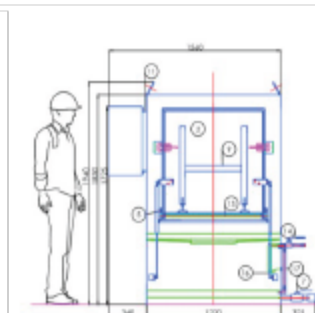

RJ-CW 9/25 - Container Washer

With 30 years' experience in chemical degreasing we understand the complexity of our customers requirements. That is why all our container washers can be adjusted to remove oils, surfactants, acids and alkalis by adjusting the wash liquor, cycle times and temperatures. If you require a solvent wash or are dealing with combustible materials the machine can be fabricated to ATEX standards so that your operator are safe no matter the hazardous nature of the chemicals used.

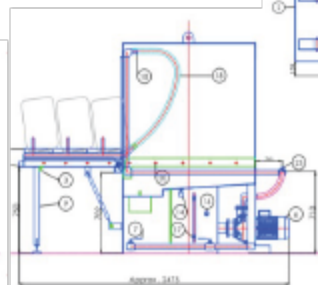

To increase the longevity of the machine low-water protection and coarse filtration is included as standard. This coupled with regular maintenance, facilitated by the provided clean-out doors, makes the RJ-CW 9/25 suitable for even the most demanding industrial applications.

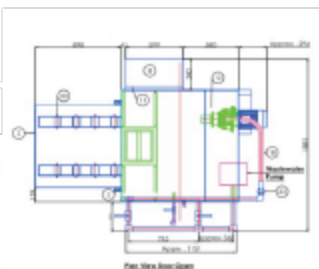

Throughput	20 p/hr
Height	1725 mm
Width	1560 mm
Length	2475 mm
Pump Power	4 kW
Pump Pressure	5 - 6 BAR
